

Summer Mix

Basic mix for wild bird feeding for breeding and rearing period

- ✓ for birds that eat soft food and grains
- ✓ particularly high-energy
- ✓ adapted for the rearing period

Basic mix with insects and seeds for year-round feeding of birds that eat soft fruits and grains, especially during breeding and rearing periods. *Summer Mix* is a high-quality natural product without added sugar and preservatives and it is GMO free. Consisting of high-quality soft food and selected seeds, nuts and vegetables, it is ideally suitable for soft bill birds as well as for grain eating birds and it can be fed in a feed silo. It is prepared with soya oil so that it is ready to feed.

Ingredients:

Seeds (26%), bakery products (unsweetened)¹, molluscs and crustaceans² (10%), soya oil (12%), cereals (13%), vegetable by-products³, nuts (2%), vegetables (2%), minerals (1%)

Feeding recommendations:

Ensure your feeding area is clean and hygienic. If possible, change your feeding ground within a close radius from time to time. It is best to have several smaller feeding areas near to escape routes, such as trees and bushes. The birds must have got used to the feeding ground. Ornithologists recommend adapted year-round feeding: In winter, high-energy feed should always be available. In summer, lower-fat mixtures are preferred. High-quality, protein-rich foods, such as *Claus Garden Bird Food*, are also essential during the breeding season and the nutrient-draining period of feeding young birds. *Claus Winter Food* is best suited for insect-eating birds in the winter.

Complementary feed for birds:

Analysis:

Crude Protein	18%	Crude Fibre	5%
Crude Fat	17%	Crude Ash	7%

Package sizes:

700 g	Code	454
5000 g	Code	456
25 kg	Code	459

Explanations:

- ¹ Unsweetened wafers are used on purpose, since soft eaters are not able to extract energy out of cereals. During the baking process the flowers are heated with water. Then carbohydrates are opened and the end product delivers energy very quickly, just how it is needed by the metabolism of the bird.
- ² Small invertebrate water animals as water fleas and smallest freshwater shrimps are high on protein and a thin soft shell. In biology they do not belong to insects, so concerning to the German food and feed code need to be declared as "molluscs and crustaceans". They do not have sharp-edged shells.
- ³ Open vegetable products with high protein, which can also be digested by insect eaters. The proteins inside complete the amino acid spectrum of animal elements.

Shelf life:

At least 12 months from date of manufacture. Keep well sealed after opening and store in a cool, dry place.
