

Premium Wild Seed Mix

Species-appropriate special food for granivorous wild birds

- ✓ compensates for dietary shortages
- ✓ with selected wild seeds and insects
- ✓ for siskins, bullfinches, goldfinches, chaffinches and others

Premium Wild Seed Mix is an extremely high-quality mixture that can be fed throughout the year. It is orientated particularly towards the needs of granivorous wild birds such as siskins, bullfinches, goldfinches, chaffinches and others. Since nowadays ever more fallow land with wild shrubs and other sources of food on fields, in parks, in gardens and on path edges is being lost, the natural food sources of the granivorous wild birds are also drying up more and more. Our mixture includes a varied selection of wild seeds such as millet, spinach, carrots, rape seed, kardi, grass and others. They provide the birds with valuable energy and nutrients. Additional insects supply them with an extra portion of valuable protein. Regular feeding compensates for dietary shortages.

Ingredients:

Seeds (98%), insects (2%)

Feeding recommendation:

The *premium wild seed* is outstanding as an all-year feed for the bird feeder or bird-seed dispenser and also as a spreading feed. Please ensure that the bird table is clean and always provide fresh water for the birds and other garden inhabitants.

In the cold months from November to March, we recommend the energy-rich *Winter Mix* from Claus for grain eaters, which can additionally be enhanced with our *Premium Wild Seed Mix*, so that the birds' higher energy requirements in the cold season are adequately covered.

Complementary feed for birds:

Analysis:

Crude Protein	15%	Crude Fibre	14%
Crude Fat	13%	Crude Ash	3%

Package sizes:

700 g Code 464

Shelf life:

At least 12 months from date of manufacture. Keep well sealed after opening and store in a cool, dry place.
